

Tip OF THE WEEK

How to Administer Booster Concentrate by Mixing with Food

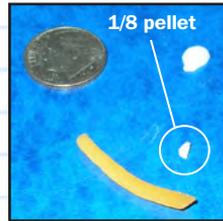

You can hide the Booster Concentrate® pellet(s) using your pet's favorite treat or a commercially available pill-hiding treat if your pet doesn't like the taste.

1. HEALx Booster Concentrate® is administered orally based on body weight. Measure the amount of Booster Concentrate® pellets required for the daily dose (see chart).

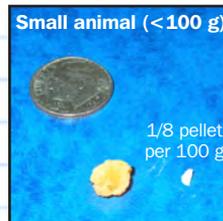

SAMPLE DOSAGES	
Body Weight	Daily Dose
Under 100 g (0.22 lb)	1/8 pellet
500 g (1.1 lb)	1/2 pellet
1 kg (2.2 lb)	1 pellet

Initial dose should not exceed 3 pellets, regardless of body weight. Increase to full dose over several days.*

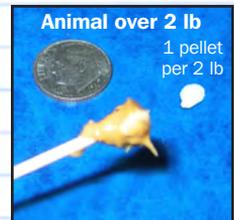

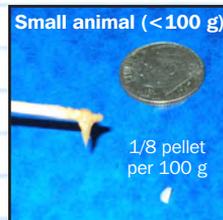

2. For animals/birds (under 100 g), cut 1 Booster Concentrate® pellet into 8 pieces. Feed 1/8 pellet per 100 g animal's body weight or 1 pellet per 2.2 lb of the animal's body weight once daily.

3. Cover the Booster Concentrate® pellet or partial pellet with small piece of cheese or other formable food and roll into a ball. Use just enough cheese/food to cover the entire pellet or piece.

4. Alternatively, you can use a small amount of peanut butter. Use just enough to cover the entire Booster Concentrate® pellet or partial pellet.

*The amount of Booster Concentrate® can be increased gradually to full dosage. Do not exceed 1 tsp per 100 lb (45 kg) body weight unless directed by your veterinarian.
