

Tip OF THE WEEK

An Easy, Convenient Way to Store & Feed Sunshine Factor, Booster or Releases

DISC METHOD

4 Easy Steps:

1. Run warm water over the bottle to liquefy the product.
2. Pull up in a wide mouth syringe and squirt out in 2 ml "globs" on wax paper.
3. Refrigerate until firm.
4. Stack the 2 ml "discs" in a container in the refrigerator (they will stay separated).

"It is so easy to administer now!

I can break off an appropriate amount (e.g., $\frac{1}{4}$ disk is 0.5 ml) and feed it easily. And, I'm not warming up bottles every day or guessing on my dosing. I also did this with Releases. It is perfect solution for this product, because it distributes the raspberry leaves evenly in the 'discs.' "
