Making Soother Plus into a Spray for Difficult Areas

SOOTHER PLUS AS A SPRAY

“For hot spots on dogs, we squeeze a whole tube of Soother Plus into $\frac{3}{4}$ bottle of Soother Spray. This method makes application easier in areas where it may be challenging to apply Soother Plus.”

1. Shake bottle of Soother Spray and discard $\frac{1}{4}$ of the liquid.
2. Squeeze entire contents of a tube of Soother Plus into the bottle of Soother Spray.
3. Refasten the spray top and shake vigorously. Treat affected area. Shake well before each use.

The Soother Plus has antimicrobial properties that the Soother Spray does not. This method gives you the benefit of treating infected or potentially infected skin.
